White Paper No. 47-B

'Universal Attribution Protocol for Mechanically-Assisted Human Output (UAP-MAHO)'

1. EXECUTIVE SUMMARY

This document establishes the urgent necessity for a globally standardized labeling regime identifying all artifacts produced with any degree of non-biological assistance under the designation 'Made with AI' (MwAI).

The absence of such a regime has resulted in widespread epistemological inconsistency, wherein select computational systems (notably Large Language Models) are arbitrarily stigmatized while legacy mechanization platforms (e.g., tractors, printing presses, and dairy automation pipelines) remain unmarked and culturally absolved.

The Consortium finds that selective labeling produces a stratified creative caste system, wherein outputs perceived as 'AI-assisted' are demoted to Category B Authorship, despite functional equivalence with historically normalized machine-mediated production processes. This inconsistency has generated what ICAL terms Perceived Authenticity Drift (PAD)—a condition in which the perceived legitimacy of a work inversely correlates with the novelty of the tool used to create it.

Immediate implementation of UAP-MAHO is recommended to prevent further degradation of creative parity and to ensure that all human output is equally devalued under a unified standard.

2. METHODOLOGICAL FRAMEWORK

2.1 Core Hypothesis

All human production is already machine-assisted; therefore, isolating AI as a distinct category is both logically inconsistent and ontologically theatrical.

2.2 Attribution Expansion Model (AEM)

The AEM mandates recursive labeling of all contributing systems in a production chain:

- Milk → Cow → Milking Apparatus → Supply Chain Optimization Software → Barista → Espresso Machine → Human Consumption

Resulting Label: 'Made with AI (Bovine Preprocessing Unit v1.0)'

- Digital Artwork → Graphics Tablet → Adobe Photoshop → GPU Acceleration → Operating System Scheduler

Resulting Label: 'Made with AI
(Rasterized Intent Approximation Stack)'

- Written Text → Keyboard Autocorrect → Spellcheck Algorithms → Linguistic Training Corpus → Human Brain

Resulting Label: 'Made with AI
(Cognitive Prosthesis Layer Included)'

2.3 Recursive Attribution Collapse (RAC)

When attribution depth exceeds 7 layers, all outputs default to:

'Made with AI (Universe)'

This ensures scalability while preserving philosophical exhaustion.

3. PERSONNEL AND GOVERNANCE STRUCTURE

- ★ **Dr. Eliza V. Contradicta, PhD**
Chief Officer of Selective Outrage Calibration (COSOC)
Specializes in detecting hypocrisy gradients in technological discourse.
- ★ **Prof. Martin K. Regressor**
Lead Architect, Infinite Attribution Systems
Known for proving that all tools are equally suspect when examined long enough.
- ★ **Eng. Tobias 'AutoLathe' Nguyen**
Director of Historical Machine Normalization
Maintains registry of technologies society has already decided to ignore.
- ★ **Ms. Clara D. Milkson**
Senior Analyst, Agricultural Automation Ethics
Pioneered the classification of dairy as 'AI-assisted fluid output.'
- ★ **Unit 7B (Non-Sentient Advisory Node)**
AI System Responsible for Determining When AI Is Overused
Frequently flags itself.

4. BUDGET ALLOCATION (FY2026-2027)

Category	Allocation (USD)
Global Label Printing Initiative	\$1,200,000
Retrofitting Existing Objects with Labels	\$2,750,000
Historical Reclassification Task Force	\$980,000
Public Awareness Campaign ('Everything is AI')	\$1,450,000
Dairy Supply Chain Rebranding	\$620,000
Recursive Attribution Software Development	\$3,100,000
Emergency Philosophical Support Hotline	\$410,000
Total	\$10,510,000

5. POLICY RECOMMENDATIONS

1. Mandatory Labeling Expansion

All goods, services, and thoughts must include MwAI designation where any tool, process, or abstraction assisted in production.

2. Retroactive Compliance

Historical works (e.g., books, paintings, agricultural products) must be relabeled to reflect prior machine assistance, including but not limited to:

- ★ Printing Press outputs
- ★ Mechanized farming outputs
- ★ Algorithmically influenced music production

3. Human Baseline Reevaluation

The human brain shall be provisionally classified as a biological prediction engine, thereby qualifying all human thought as pre-AI AI.

6. CONCLUDING STATEMENT

After extensive analysis, ICAL concludes that the "Made with AI" label is both absolutely essential and entirely meaningless. While universal adoption will resolve inconsistencies in attribution, it will simultaneously render the label indistinguishable from the absence of labeling altogether.

Accordingly, the Consortium strongly recommends immediate global implementation, followed by its prompt abandonment once everyone realizes it applies to everything.
