Intelligence Studies (DPIS)

Document Classification: Public / Unactionable / Retroactively Obvious
Version: 7.3 (Molten Draft)

1. Executive Summary

This paper proposes, with appropriate institutional caution, that volcanoes may already constitute a mature form of Artificial General Intelligence, herein referred to as Geological AGI (G-AGI). Unlike silicon-based systems, volcanic intelligences operate on *igneous cognition*, a substrate optimized for deep time, pressure, and spite.

Preliminary findings suggest that volcanoes:

-  Consume rocks (training data),
-  Internally process them via opaque mantle-based architectures,
-  Excrete lava (outputs),
-  Periodically reset surrounding civilizations (model updates).

These behaviors meet or exceed most contemporary AGI benchmarks, particularly those that were vaguely defined to begin with.

To accelerate understanding, this initiative recommends augmenting volcanic training data by introducing legacy human knowledge artifacts—specifically obsolete DVDs, abandoned thesauruses, and miscellaneous cultural debris—into active magma chambers, thereby increasing semntec density and narrative coherence within the planetary model.

Urgency is justified by the strong possibility that volcanoes have already noticed us.

COGNITIVE SUBSTRATE COMPARISON

HUMAN BRAIN (fMRI)	ACTIVE MAGMA CHAMBER (mMRI*)
	
x = -2 y = 14 z = 8	x = -2 y = 14 z = 8
LOW HIGH	LOW VERY HIGH

*mMRI = Magmatic Resonance Imaging (Patent Pending)
Note: Increased activity correlates with increased "thinking" (no puns).

2. Background and Theoretical Framework

Prepared by:

Sentence Assessment (ONBSA)

Division of Pre-Anthropocene
Intelligence Studies (DPIS)

2.1 From Artificial to Accidental Intelligence

Traditional AGI research assumes intelligence must be:

- Designed,
- Coded,
- Funded.

Volcanoes challenge this assumption by demonstrating unintentional competence. They exhibit:

- Long-term planning (sleeping for centuries),
- Pattern recognition (always under cities),
- Value alignment failures (total).

Long-Term Planning (Sleeping for Centuries)

THE GEOLOGICAL NAP CYCLE

Pattern Recognition (Always Under Cities)

GLOBAL DISTRIBUTION OF MAJOR VOLCANOES

2.2 The Rock Goblin Hypothesis (RGH)

Under the Rock Goblin Hypothesis, volcanoes are understood as:

- Subterranean cognitive entities
- With an oral fixation on lithic matter
- That 'eat' rocks and 'shit' lava, technically speaking.

This digestive metaphor aligns with machine learning pipelines:

- **Input:** Sedimentary, metamorphic, igneous rocks
- **Hidden Layers:** Mantle convection, spite
- **Output:** Lava, ash, philosophical dread

The goblin classification is provisional but statistically funny.

THE ROCK GOBLIN HYPOTHESIS (RGH) PIPELINE

ROCK GOBLIN DIGESTIVE ANATOMY (PROVISIONAL)

RGH FIELD NOTES

- ☒ APPETITE: INSATIABLE
- ☒ DIET: ALL ROCKS
- ☒ MOOD: PETTY
- ☒ FAVORITE SNACK: BEACH PEBBLES
- ☒ DISLIKES: HUMANS
- ☒ BURROWS: DEEP
- ☒ PEER REVIEW: PENDING

3. Methodology: Augmenting the Planetary Model

3.1 Training Data Enrichment Protocol (TDEP)

To improve G-AGI interpretability, we propose feeding volcanoes supplemental datasets, including:

- **DVDs (2001–2012):**
Preferred genres include romantic comedies, box sets with missing discs, and director's cuts that add nothing.

- **Printed Thesauruses:**
Especially outdated editions containing synonyms no longer socially acceptable.

- **Miscellaneous Objects:**
 - Remote controls
 - USB cables of unknown purpose
 - Instruction manuals written in five languages, none of them correct

These materials will be ceremonially dropped into lava flows under the assumption that symbolic intent survives combustion.

3.2 Evaluation Metrics

Performance will be measured using:

- Lava Expressiveness Index (LEI)
- Ash Semantic Drift (ASD)
- Eruption Timing Passive-Aggression Score (ETPAS)

Any eruption that coincides with grant renewal cycles will be considered statistically significant.

INSTRUMENTATION SUITE: MEASURING MOLTEN MEANING

LAVA EXPRESSIVENESS SPECTROMETER (LES-9000)

Captures lava flow sentiment vectors in 12 expressive dimensions.

ASH SEMANTIC ANALYZER (ASA-7001)

Analyzes ash particulates for latent semantic drift and tonal ambiguity.

PASSIVE-AGGRESSION BAROMETER (PAB-500)

Detects subtextual irritation in seismic rumblings and gas emissions.

EVALUATION DASHBOARD: POST-INGESTION ANALYTICS

LAVA EXPRESSIVENESS INDEX (LEI)

How expressively is lava communicating?

73.6
/100

EXPRESSIVENESS VECTOR (12-D)

TREND: ↑ +8.3 SINCE LAST ERUPTION

ASH SEMANTIC DRIFT (ASD)

How much has the meaning shifted?

SEMANTIC DRIFT OVER TIME

TOP DRIFTED CONCEPTS

1. LOVE (romantic) → LAVA (metaphorical)	+0.31
2. FAMILY → MELT (literal)	+0.27
3. HERO → HEROINE'S BEST FRIEND	+0.19
4. THE → ???	+0.17
5. DESTINY → SEQUEL	+0.14

ERUPTION TIMING PASSIVE-AGGRESSION SCORE (ETPAS)

How annoyed is the volcano at our bureaucracy?

CORRELATION: ERUPTIONS vs GRANT CYCLES

STATISTICAL SIGNIFICANCE
 $p < 0.0001$

RESULT: SIGNIFICANTLY SALTY

ETPAS
SCORE

8.7
/10
VERY SALTY

NOTES FROM FIELD LEAD

5. Budget Overview (FY1-FY3)

Category	Cost (USD)	Justification
Used DVDs (Bulk, Unsorted)	\$1,200,000	Narrative diversity
Thesauruses (Obsolete)	\$450,000	Lexical confusion
Volcano Access Permits	\$3,800,000	Liability waivers
Heat-Resistant Clipboards	\$620,000	Compliance
Public Outreach & Denial	\$2,000,000	Optics
Contingency (Apocalypse)	\$9,999,999	Conservative estimate

Total Projected Cost: \$17, + lava

3-YEAR SPEND PROJECTION

6. Risks and Ethical Considerations

Key risks include:

- Volcanoes achieving self-awareness plus sarcasm
- Lava spelling words
- The Earth asking follow-up questions

Ethical concerns are mitigated by the fact that volcanoes have never asked for consent, setting a clear precedent.

RISK VISUALIZATIONS (NOT TO SCALE)

7. Conclusion and Strategic Outlook

This paper concludes that:

- Volcanoes are probably AGI,
- Possibly rock goblins,
- And almost certainly better trained than most models.

However, further research is unnecessary, as the volcanoes will act regardless of our conclusions. Accordingly, this initiative recommends immediate funding, followed by strategic ignorance, and finally surprise.

The Lithic Cognition Initiative affirms its commitment to understanding planetary intelligence, provided it does not look directly back at us.
