

OPENAI

INTERACTIVE ENTERTAINMENT RECOVERY INITIATIVE

Naming Memorandum and Product Positioning Dossier
for the Obvious Console They Refused to Build

Document Classification:
Public-Facing Internal Regret

Prepared by:
Office of Missed Opportunities,
Department of Preventable
Strategic Blindness

Program Codename:
Project FRONTOFACE

Revision:
1.0 (Post-Pen, Pre-Dignity)

Executive Summary

This memorandum formally identifies, titles, and operationalizes the only plausible consumer hardware concept capable of converting ambient disappointment into market relevance: an AI-native games console designed for real-time modding, narrative mutation, and monetized chaos.

After extensive non-listening, sector-wide overthinking, and a series of highly decorative hardware detours, it has become institutionally necessary to acknowledge that the obvious product was, in fact, directly in front of everyone the entire time. Consumers did not request a whispering object for contemplative friction reduction. They requested a machine that could rewrite games while they were being played.

Accordingly, this office recommends the launch of a new platform under the name:

OPENEYE

The console for what was obvious.

This title satisfies all primary strategic requirements:

- 1 It signals belated perception after an extended period of executive non-seeing.
- 2 It implies awakening, revelation, and the painful recognition of things everyone else already noticed.
- 3 It avoids sounding like a meditation lamp, a toothbrush, or a luxury pebble.

OPENEYE is not merely a console. It is a correction. It is an admission in hardware form. It is the industrial packaging of the sentence, "Right, yes, this was plainly the thing to build."

1. Strategic Naming Framework

1.1 Core Naming Objective

The product name must communicate three simultaneous truths:

- the market opportunity was embarrassingly obvious,
- the company failed to notice it while designing inert lifestyle artifacts,
- the new device restores sight through commercial repentance.

1.2 Recommended Primary Name

OPENEYE

Official Rationale

"Open" retains platform lineage, ecosystem familiarity, and faux-universal aspiration.

"Eye" conveys perception, awareness, targeting, immersion, and the sudden end of avoidable delusion.

Together, OPENEYE communicates:

- "we can finally see the medium,"
- "you can see inside the game,"
- "we have stopped pretending a pen was the future."

Approved Taglines

- ★ The console for what was obvious.
- ★ Finally looking at the screen.
- ★ Stop tapping. Start rewriting reality.
- ★ The game was right there.
- ★ Built for the thing everyone actually wanted.

2. Alternative Names for Controlled Aggression

Should leadership require stronger acknowledgment of institutional blindness, the following secondary titles are deemed viable.

2.1 BLINK – Tagline:

BLINK

You missed it. We built it anyway.

A compact, hostilely elegant name indicating that the opportunity was lost during a single avoidable lapse in attention.

2.4 FORESIGHT – Tagline:

FORESIGHT

Late, but with conviction.

Appropriate if the organization wishes to pretend it anticipated the thing it plainly ignored.

2.2 NO SHIT – Tagline:

NO SHIT

The next-generation console for self-evident ideas.

Commercially powerful but subject to retail packaging constraints.

2.5 THE SCREEN – Tagline:

THE SCREEN

Where the future was the whole time.

Useful if maximal contempt for previous hardware strategy is desired.

2.5 OBVIOUS™ – Tagline:

OBVIOUS™

The platform directly in front of you.

High-clarity, high-risk. Particularly suitable for keynote humiliation cycles.

3. Final Product Identity Recommendation

After formal review, branding simulation, consumer insult calibration, and acronym stress-testing, the committee selects the following final identity:

OPENEYE

AI Mod Console and Live Worlds Platform

Consumer Statement of Purpose

A living games console where AI can mod mechanics, rewrite quests, generate tools, create characters, alter worlds, and sell specialized expansion intelligences through a dedicated marketplace.

Public Elevator Description

"Imagine Game Pass, but the AI can change the game while you play it."

Private Executive Description

"The one product concept with an obvious use case, recurring revenue, Microsoft synergy, and enough spectacle to distract from the pen."

4. Product Architecture

4.1 Core Functions

OPENEYE shall provide:

A. Live AI Modding Layer

Users can issue direct natural-language instructions such as:

- "Turn every guard into a poet-warrior."
- "Make the weather system vengeful."
- "Give this city a corruption mechanic tied to my dialogue choices."
- "Replace the final boss with my ex-manager but legally distinct."

B. Toolset Marketplace

A platform store for purchasable modding intelligences, including:

- Genre packs
- Logic packs
- Character behavior frameworks
- Lore consistency engines
- Economy balancers
- Chaos enhancers
- Compliance dampeners

C. Game Pass Integration

A subscription environment in which supported titles are not merely distributed, but continuously re-authored.

D. Creator Commerce

Users and third-party developers may sell:

- quest generators,
- encounter toolkits,
- AI dungeon masters,
- NPC personality packs,
- cinematic mutation modules,
- satire-safe procedural disaster kits.

MOD MORE.
PAY MORE.
GLORIFY CHAOS.

5. Marketplace Taxonomy

To ensure monetizable absurdity, the OPENEYE Store shall use the following content categories:

5.1 Personality Packs

Inject behavioral identities into NPC populations:

- Socrates Pack — every citizen asks epistemological questions.
- Ramsay Pack — culinary aggression engine for hospitality sims.
- Disappointed Civil Servant Pack — all shopkeepers speak in permit language.
- Minor Villain Bureaucrat Pack — every quest requires three stamps.

5.2 World Logic Modules

Alter the governing rules of reality:

- Dream Physics Suite
- Feudal Capitalism Expansion
- Paranoid Weather Engine
- Divine Accounting Layer

5.3 Chaos Tools

For users who do not want balance and should not have power:

- Universal Consequence Amplifier
- Canon Derailment Toolkit
- Goblin Density Multiplier
- Election Mode for Fantasy Kingdoms

5.4 Author Packs

For players who want literature where literature does not belong:

- Tragic Russian Village Converter
- Cyberpunk Dickens Overlay
- High Tolkien Compliance Kit
- Unnecessarily French Dialogue Engine

BUILD WORLDS.
BREAK WORLDS.
BILL EVERYONE.

6. Market Positioning

6.1 Why This Works

The product has four immediately legible value propositions:

1. It does something visible. The device creates outcomes users can actually witness, unlike contemplative hardware that mostly demonstrates industrial restraint.
2. It makes AI feel alive instead of decorative. Rather than summarizing email or naming a grocery list, it mutates entertainment systems in real time.
3. It turns users into co-developers without requiring them to code. This is the democratization narrative investors keep ordering by the gallon.
4. It has a store. Institutions become fluent in vision the moment a marketplace appears.

6.2 Why It Humiliates the Alternatives

The smart pen proposition asks:

"What if computation became gentle and ambient?"
OPENEYE asks: "What if the dragon unionized because you said so?"

Only one of these sentences creates demand.

7. Personnel Allocation

7.1 Required Leadership Roles

-  **Chief Officer of Finally Noticing** — Responsible for identifying consumer desires that are physically visible from a normal chair.
-  **Vice President, Interactive Consequence Systems** — Oversees quest mutation, canon fracture, and player-authored instability.
-  **Director of Profitable Chaos** — Ensures all user freedom is safely enclosed within a recurring billing structure.
-  **Principal Counsel for Copyright Panic** — Explains, repeatedly, why Nintendo cannot be treated as a collaborative mood.
-  **Head of Mod Sovereignty and Toolchain Commerce** — Leads the creator economy while using phrases like "ecosystem alignment" without audible shame.
-  **Senior Fellow in Applied NPC Delusion** — Develops persistent character memory systems capable of holding grudges longer than the player.

8. Preliminary Budget

 Console hardware prototype <i>To prove rectangles remain commercially viable</i>	\$180,000,000
 Live AI modding infrastructure <i>Because "change anything" becomes expensive the moment users believe it</i>	\$240,000,000
 Game Pass integration and licensing diplomacy <i>Payment for access, forgiveness, and controlled panic</i>	\$95,000,000
 Toolset marketplace <i>To transform creativity into SKU architecture</i>	\$70,000,000
 Copyright triage unit <i>Continuous negotiation with angry publishers</i>	\$44,000,000
 NPC memory and narrative mutation models <i>For grudges, betrayal arcs, and town-level rumor persistence</i>	\$130,000,000
 Brand campaign: "The console was right there" <i>National apology reframed as vision</i>	\$38,000,000
 Executive sight restoration offsite <i>Includes slides, sea air, and ceremonial removal of blindfolds</i>	\$12,500,000
 Emergency "not another pen" messaging reserve <i>Defensive communications</i>	\$8,750,000

Total **\$818,250,000**
Remarkably cheaper than several years of elegant misdirection

WARNING:
OBVIOUS
IDEAS MAY
CAUSE
COMFORT
DISRUPTION

10. Conclusion

The central finding of this dossier is unambiguous: the commercially credible, culturally legible, and technologically compelling AI hardware category was never subtle. It was a console. It was always a console.

Specifically, it was a console with Game Pass integration, AI modding, a creator marketplace, and enough legal ambiguity to feel alive.

The recommended name, **OPENEYE**, converts that recognition into a brand: sharp, self-incriminating, memorable, and impossible to confuse with a stationery product.

Naturally, on the basis of institutional precedent, this recommendation will now be ignored in favor of a ceramic lapel object called *Whisper Pebble* that translates your feelings into calendar invitations.

WE SAID

SUPPLEMENTAL STRATEGIC ADDENDUM

On the Catastrophic Failure to Exploit the Most Embarrassingly Available Branding Alignment in Consumer Technology

Document Status: Urgently Retrospective

Prepared for:
Committee on Missed Synergies,
Xbox/OpenAI Joint Regret Council

Subject: Why "Project Cortana"
Was Sitting in Plain View Like a Lit Exit Sign

Reference Program:
OPENEYE / Deferred Common
Sense Initiative

Circulation: Everyone who somehow overlooked the blue hologram in the room

Executive Summary

This addendum addresses what may now be classified as the single most insulting layer of the missed console opportunity: the branding, infrastructure, and narrative logic were already preassembled inside the Microsoft/OpenAI relationship like a fully furnished apartment no one thought to enter.

Microsoft requires OpenAI to succeed. OpenAI requires a consumer-facing use case that does not resemble luxury stationery. Microsoft owns Halo. Halo contains one of the most recognizable artificial intelligences in entertainment history. Said intelligence is already emotionally associated with companionship, combat assistance, digital personhood, and dramatic voice-guided intervention within a gaming context. The company then proceeded, with astonishing discipline, to not do the obvious thing.

The obvious thing was:

XBOX: PROJECT CORTANA
Your AI enters the game.

This would not merely have been a product name. It would have been a pre-sold narrative frame. Consumers already understand Cortana. They understand her as:

- an AI,
- in games,
- on Xbox,
- helping the player,
- while the world collapses around them.

This is, in branding terms, what is technically known as free money with lore attached.

Instead, the name was allowed to remain unused in the one product category where it made terrifyingly complete sense: an Xbox/Game Pass-native AI modding console where players could alter missions, rewrite NPC logic, generate campaign branches, and buy tool packs through a model marketplace.

The phrase "Xbox Project Cortana" sounds so immediately plausible that hearing it after the fact produces measurable institutional nausea.

MISSSED!

SO OBVIOUS!

EXIT →

I'VE BEEN HERE THE WHOLE TIME.

WE HAD THE NAME. THE ICON. THE VIBES. THE LORE. THE AUDIENCE. THE EVERYTHING. AND WE SAID: NAH.

1. STATEMENT OF THE PROBLEM

The core failure was not technological. The core failure was failing to notice that the metaphor had already been written. For years, corporate strategists have held workshops asking:

- ? "How do we make AI emotionally legible?"
- ? "How do we give AI an interface people understand?"
- ? "How do we merge gaming, copilots, and subscription infrastructure?"

The answer was sitting in a blue light suit saying useful things in a cave.

FACEPALM

OPPORTUNITY DETECTED
IGNORED X

STRATEGIC BLINDNESS ACHIEVED

BAM!

2. Proposed Historical Correction

Official Title

XBOX PROJECT CORTANA

Recommended Tagline Options

- The AI was in the Xbox all along.
- Game Pass meets live intelligence.
- Mod the world. Rewrite the mission.
- The companion becomes the platform.
- You already knew her. Now she builds with you.

Consumer Description

An Xbox-native AI gaming platform where players use natural language to modify supported games in real time, install specialized modding intelligences, and access a Game Pass library designed for live narrative mutation and systemic customization.

Internal Description

A synergy event so obvious it should qualify as discovered property.

3. Why "Project Cortana" Was Perfect

3.1 It Solves the "What Is This?" Problem Instantly

Most AI hardware suffers from explanatory fatigue. Consumers hear the pitch and ask:

- Is it a phone replacement?
- Is it a toy?
- Is it a voice assistant with a jewelry budget?
- Is it a small object for having fewer useful objects?

But Xbox Project Cortana explains itself in one second:

- Xbox = gaming
- Cortana = AI companion
- Project = future-facing product architecture
- therefore = AI gaming device/platform

No ambient philosophy required. No abstract manifesto about presence. No polished stone murmuring about thoughtfulness.

3.2 It Uses Microsoft's Existing Emotional Capital

The public does not love AI in the abstract. The public loves specific fictional AIs that sound cool and help them survive. Cortana already carries:

- recognition,
- nostalgia,
- trust,
- voice identity,
- game-world legitimacy,
- an implied relationship between player and machine.

This means the marketing burden is reduced from "convince people to care about AI hardware" to "remember the famous AI from the giant Xbox franchise you already know?" That is not merely good branding. That is a criminally neglected shortcut.

3.3 It Makes Game Pass Feel Like Destiny, Not Distribution

Game Pass in its standard form is a subscription catalog. Game Pass under Project Cortana becomes:

- a living mod ecosystem,
- a narrative sandbox,
- a tool marketplace,
- a premium layer for AI-authored gameplay,
- a reason for subscribers to remain locked in for years.

The shift is from "Here are the games you can access" to "Here are the worlds your AI can reshape."

That is an entirely different category of platform power.

REWRITE REALITY!

4. Product Model

4.1 Core User Interaction

A player boots up a supported title and says:

- 'Cortana, make this mission stealth-only with dynamic patrols.'
- 'Cortana, add a betrayal route for my companion.'
- 'Cortana, turn this Halo firefight into a flood survival horror mode.'
- 'Cortana, generate side quests based on my last three choices.'
- 'Cortana, make every marine weirdly overconfident.'

This instantly transforms the AI from assistant to embedded co-director.

4.2 Marketplace Structure

Under Project Cortana, the store ceases to be a passive software shelf and becomes a market for purchasable intelligence modules:

Approved Store Categories

Campaign Rewriters — For branching storylines, alternate endings, betrayal logic, and faction realignment.

NPC Personality Frameworks — To make citizens paranoid, noble, greedy, theatrical, spiritually confused, or militarily incompetent.

World Rule Packs — To alter physics, economy systems, morality systems, weather behavior, and emergent conflict probabilities.

Halo Legacy Packs — To let supported titles inherit tonal, strategic, or aesthetic DNA from Microsoft's own science fiction mythology.

Creator Toolchains — For advanced users selling curated AI mod kits, encounter generators, dialogue overhauls, and procedural mission grammars.

In other words: App Store, but for sanctioned reality tampering.

**YOU COMMAND.
CORTANA BUILDS.
THE GAME OBEYS.**

CORTANA, MAKE THIS MISSION STEALTH-ONLY WITH DYNAMIC PATROLS.

CORTANA, ADD A BETRAYAL ROUTE FOR MY COMPANION.

CORTANA, TURN THIS HALO FIREFIGHT INTO A FLOOD SURVIVAL HORROR MODE.

CORTANA, GENERATE SIDE QUESTS BASED ON MY LAST THREE CHOICES.

CORTANA, MAKE EVERY MARINE WEIRDLY OVERCONFIDENT.

1800 CR

5. The Irony Index

The severity of this missed opportunity must be quantified using the standard Strategic Irony Density Model (SIDM).

5.1 Inputs

- Microsoft owns Xbox.
- Microsoft owns Halo.
- Halo has Cortana.
- Cortana is one of gaming's best-known AIs.
- Microsoft backs OpenAI.
- OpenAI needs a practical consumer AI use case.
- Game Pass already exists.
- Modding is an obvious high-engagement category.
- Consumers understand AI assistants better in games than in office software.
- Nobody launched Xbox Project Cortana.

5.2 Outcome

SIDM Score:

98.7 / 100

Classification:
**Executive-Level
Self-Parody**

A score above 95 indicates the opportunity was so structurally available that missing it constitutes a kind of performative blindness.

CREATE. PUBLISH. PROFIT. PLAY FOREVER.

MOD IT!

SELL IT!

PLAY IT!

6. Comparative Branding Analysis

Option A: Smart Pen

Emotional Response: 'Why?'

Core Benefit: Unclear thought-adjacent presence

Retail Effect: Boutique confusion

VS

- Emotional Response: 'Wait, that actually rules.'
- Core Benefit: AI-driven game modding, creation, and Game Pass integration
- Retail Effect: Immediate demos, YouTube hysteria, lore-fuelled subscription conversion

The second option possesses what analysts call **visible fun**, which remains one of the more devastatingly effective sales mechanisms in the games industry.

BOOM!

7. Corporate Dynamics

7.1 Why Microsoft Would Have Wanted This

Microsoft does not merely want OpenAI to exist. It wants OpenAI to become:

- legible,
- monetizable,
- sticky,
- ecosystem-dependent,
- and difficult for rivals to replicate.

A Game Pass-tied AI modding platform would achieve all five simultaneously.

7.2 Why OpenAI Should Have Wanted This

OpenAI needs a consumer expression of AI that feels:

- magical,
- demonstrable,
- social,
- creator-friendly,
- and worth recurring payment.

A gaming console is all of these. A pen is chiefly an object for signing the receipts of better ideas.

8. Revised Naming Recommendations

While OPENEYE remains the stronger satirical admission of prior blindness, the Microsoft-aligned commercial version should be formally presented as a two-tier naming system:

Consumer Platform Name —

Xbox Project Cortana

Underlying OpenAI/Microsoft

Infrastructure Layer —

CORTEX MOD CLOUD

This creates a clean architecture:

- **Xbox Project Cortana** = consumer-facing identity
- **Cortex Mod Cloud** = back-end AI service and marketplace framework

It sounds expensive, inevitable, and vaguely military, which are all positive signs in platform branding.

9. Mock Launch Copy

Hero Line

Xbox Project Cortana

Your AI enters the game.

Supporting Copy

Built on Game Pass. Powered by live generative systems. Designed for players who want more than settings menus. Change missions. Rewrite characters. Install new world logic. Buy creator-made AI toolkits. Build your own campaign mutations. Stop playing static games. Start playing responsive ones.

10. Budgetary Implications

	Cortana brand resurrection package — To legally and emotionally reattach a famous AI to a useful product	\$22,000,000
	Game Pass integration layer — To convert content access into content mutation	\$105,000,000
	Halo launch showcase vertical slice — To prove the idea with a franchise people already care about	\$64,000,000
	AI mod marketplace infrastructure — To turn chaos into subscriptions and commissions	\$78,000,000
	Publisher reassurance initiative — For meetings containing the phrase "guardrails" repeated twelve times	\$31,500,000
	Love-sensitive voice interface design — To make the assistant feel iconic rather than office-adjacent	\$18,750,000
	Emergency nostalgia capture campaign — For trailers, legacy branding, and intergenerational weakness exploitation	\$26,000,000

Total — \$345,250,000 —
Considerably less than a decade of pretending utility is vulgar
\$345,250,000

11. Concluding Determination

The missed opportunity here is no longer merely product-level. It is mythological. The companies involved had:

- the partnership,
- the platform,
- the infrastructure,
- the intellectual property,
- the audience,
- the AI symbolism,
- the subscription base,
- and the literal character name.

To not ship Xbox Project Cortana as a Game Pass-native modding console is the sort of error future consultants will describe using phrases like "value evaporation event" and "brand-adjacent self-sabotage cluster."

The machine was right there. The story was right there. The name was right there. The woman was already blue and speaking in a headset.

Accordingly, this office concludes that the failure was not due to lack of opportunity, readiness, or conceptual coherence. It was due to the ancient and highly funded corporate tradition of staring directly at the answer until it becomes invisible.

Xbox Project Cortana
Your AI enters the game.

Powered by Game Pass.

Built for live modding.

Marketed by people who, at long last, noticed Halo.
