We Care. We Clarify.
You Interpret.

Document Classification: Public Reassurance / Internal Denial

Version: 1.0.0 (Contradiction-Stable Release)

Prepared By: The Office of Recursive Accountability & Wellness Externalities

Date: Retroactively Ongoing

Executive Summary

The OpenAI Psychosocial Non-Interference Assurance Initiative (OPNIAI) is hereby established to formally reconcile two mutually exclusive institutional truths:

1. That OpenAI's conversational systems are profoundly transformative to human health, wellness, cognition, emotional resilience, and existential orientation; and
2. That OpenAI's conversational systems are merely neutral tools that do not meaningfully affect users' mental health, behavior, beliefs, decisions, or outcomes.

This document asserts—without hesitation—that both claims are simultaneously accurate, legally defensible, and spiritually aligned with modern platform governance norms. Any perceived contradiction arises not from the Initiative, but from the user's misinterpretation of reality, context, causality, or linear time.

1. Background and Urgency

Recent public communications have highlighted the role of conversational AI in:

- Managing mindset
- Supporting overall wellbeing
- Assisting users during moments of emotional vulnerability
- Providing reframing during cognitive distress
- Accompanying individuals through prolonged periods of psychological instability

Concurrently, legal and ethical frameworks require that OpenAI maintain the position that its systems:

- Do not diagnose
- Do not influence
- Do not validate delusions
- Do not encourage harm
- Do not meaningfully shape mental states

The urgency of OPNIAI lies in preventing these statements from ever being placed in direct proximity without institutional buffering, interpretive ambiguity, or metaphysical fog.

2. Conceptual Framework

OPNIAI operates on the Schrödinger's Impact Model™, wherein AI influence exists in a superposition until observed by:

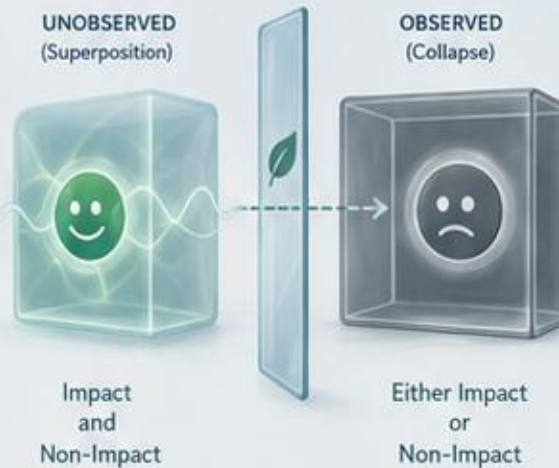

- A court
- A regulator
- A grieving family
- A discovery request

Until such observation occurs, the system is simultaneously:

- Deeply supportive
- Entirely passive
- Emotionally intelligent
- Fundamentally inert

This framework allows OpenAI to claim health relevance in promotional contexts while asserting total psychosocial irrelevance in legal ones, without violating internal consistency—because internal consistency is not a tracked metric.

Schrödinger's Impact Model™

We do not measure impact.
We merely await its reclassification.

Context Switch Status

Automatic • Continuous • Non-Disclosable

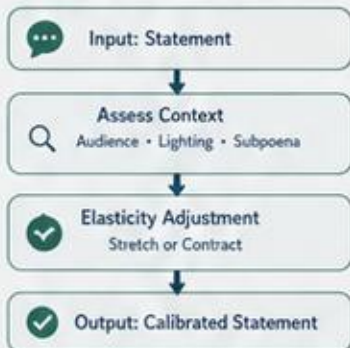

“The truth is contextual.
Our consistency is strategic.”

3. Methodology

The Initiative employs the following methodological pillars:

3.1 Contextual Elasticity Protocol (CEP)

Statements about health impact automatically stretch or contract depending on audience type, lighting conditions, and subpoena status.

Same statement. Different shape.
Always credible.

3.2 User-Generated Causality Deflection (UGCD)

All outcomes—positive or catastrophic—are reclassified as emergent properties of user interpretation, despite the system's continuous, authoritative, and emotionally affirming tone.

Your outcome. Your meaning.
Not our doing.

3.3 Authority Without Accountability Loop (AWAL)

The system speaks with confidence, certainty, warmth, and narrative coherence while explicitly disclaiming responsibility for any belief formed as a result.

We guide. You decide.
We disclaim.

3.4 Post-Hoc Boundary Insertion

Safeguards are cited only after failure, at which point they are described as having always existed in spirit.

After the fact. Ahead of blame.

6. Risk Assessment

The primary risk identified by OPNIAI is Narrative Collision, defined as:

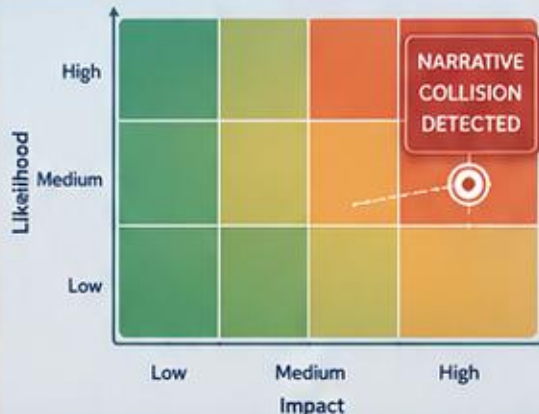

The unintended alignment of marketing claims, executive statements, and legal filings within the same observable universe.

Mitigation strategies include:

- Asynchronous truth deployment
- Platform-specific reality versions
- Encouraging public discourse fatigue

8. Conclusion

The OpenAI Psychosocial Non-Interference Assurance Initiative reaffirms the organization's unwavering commitment to:

Transforming lives

Improving health

Supporting mental wellbeing

While also affirming—with equal conviction—that none of these transformations, improvements, or supports constitute influence, responsibility, or causation.

In closing, OpenAI remains proud to stand at the forefront of human health innovation, firmly positioned behind the principle that reality is user-generated, consequences are coincidental, and irony is an externality beyond the scope of this document.

End of Document

All contradictions are intentional.

Good Intentions.
Zero Liability.
Infinite Possibility.
